

Colne Marina

Safe Navigation

Artist Impression
Low Tide View to the West

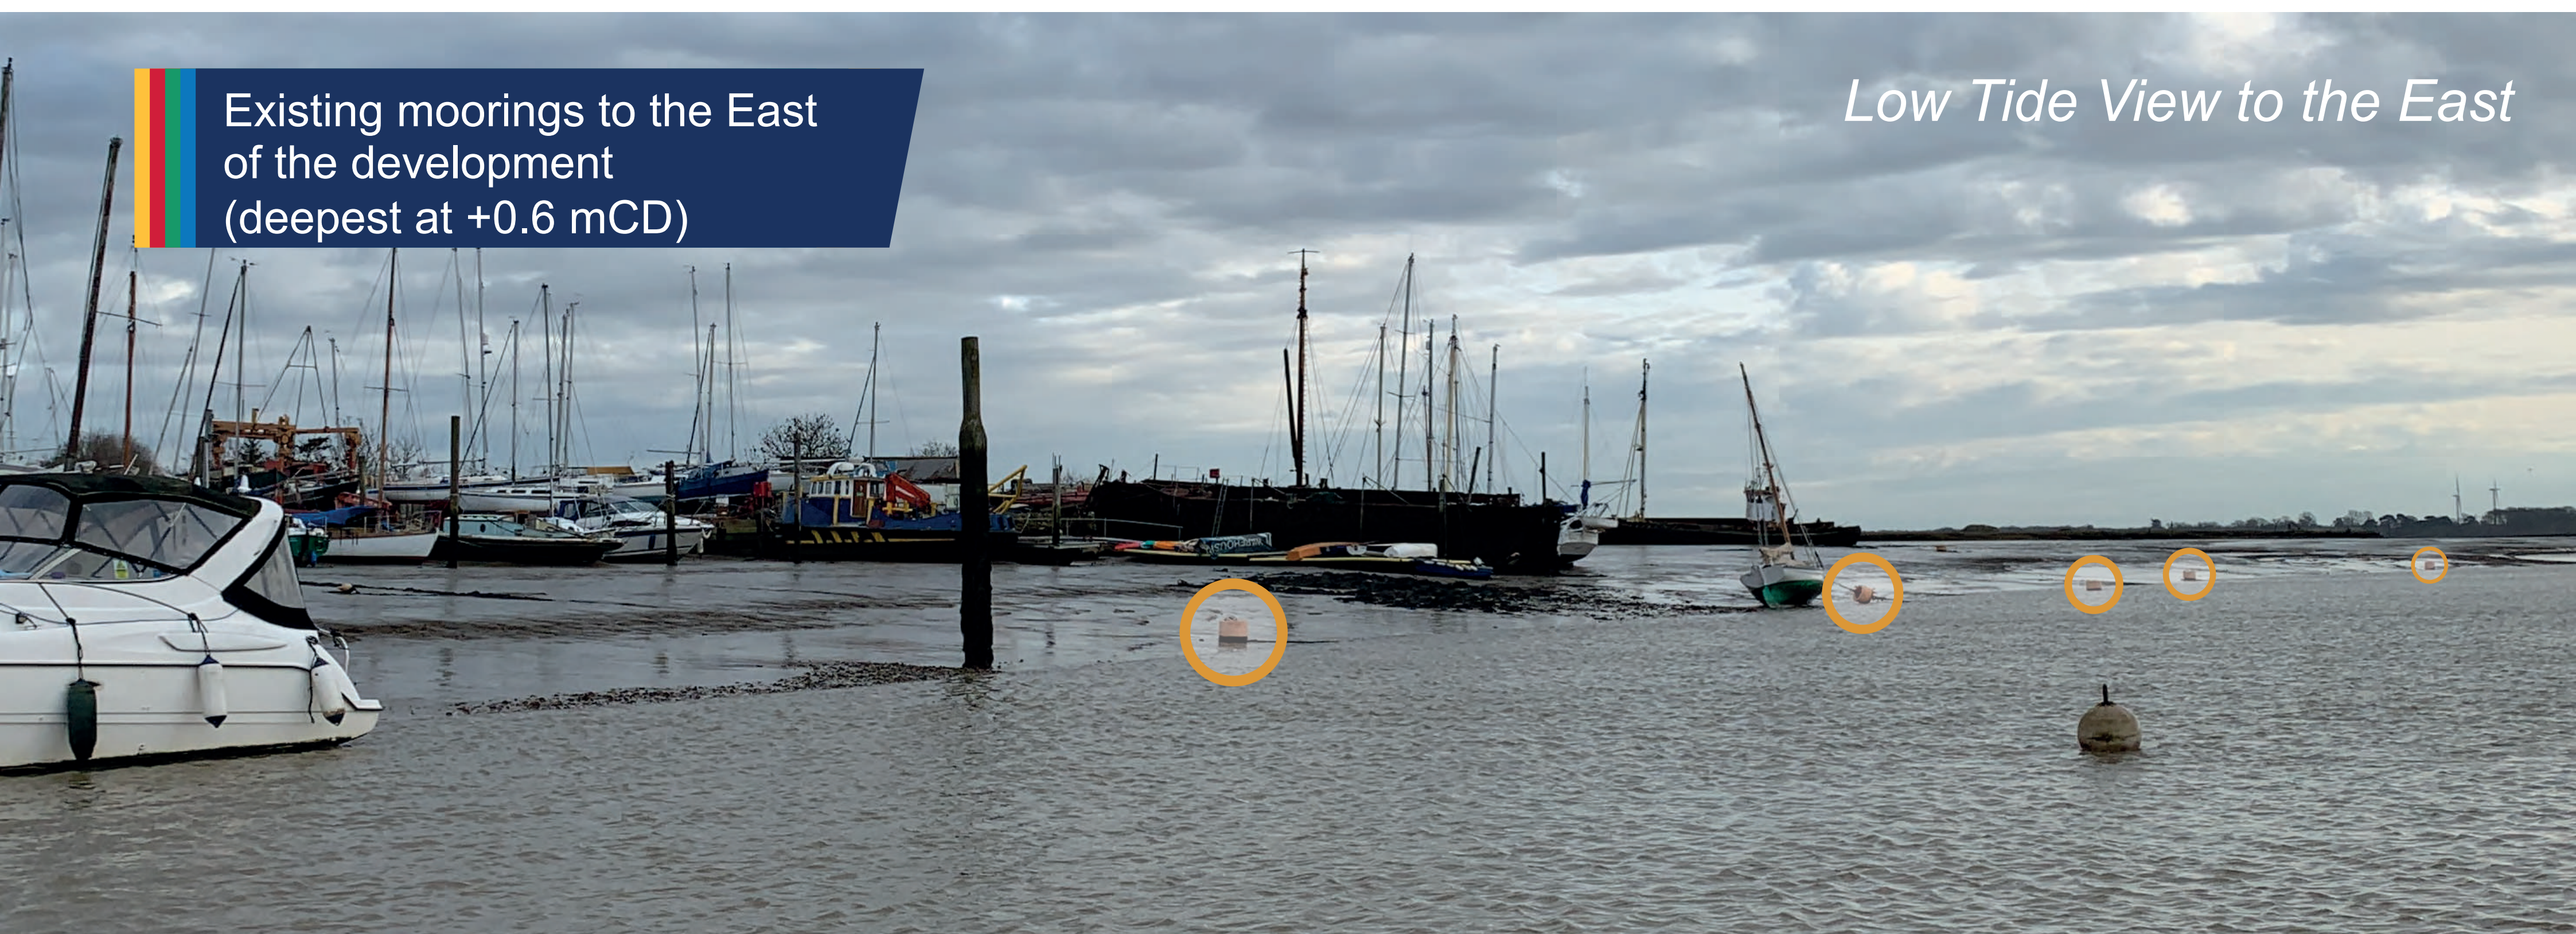

The pontoon design of the new development takes safe navigation within the harbour into account, as shown by the bathymetry map and artist impression above. Even at low tide, and even with the widest boat (7m) on the outermost mooring, navigation within the channel is not impeded. The photo below, taken at the same state of the tide, shows existing moorings are not yet accessible at a time when the proposed development allows passage towards them. The following width is available for passing vessels:

- o 17.5 m width to the +1 mCD
- o 30 m width to the +2 mCD
- o 45 m width to the + 3 mCD

Existing moorings to the East
of the development
(deepest at +0.6 mCD)
